

Electra-SM

An enriched formulation to consistently reduce all type of stress and keep the birds healthy.

Optimal Hydration and Stress Free

Reduces Mortality

Maintain immunity

Improve
productivity

Summer heat can be a challenge for poultry, leading to reduced productivity, increased mortality, and overall poor health. As temperatures rise, poultry birds are more susceptible to heat stress, which can negatively affect their feed intake, water consumption, and immune function. To combat this, providing the right support, such as electrolyte supplementation, is crucial to maintaining optimal health and productivity during the hottest months

Impact of Heat Stress in Poultry

- Reduced feed intake
- Dehydration
- Decreased egg production
- Lower growth rates
- Weakening of the immune system

The Role of Electrolytes in Managing Heat Stress

Electrolytes are vital for maintaining fluid balance and supporting cellular functions in poultry. When poultry experience heat stress, they lose electrolytes, particularly sodium, potassium, and chloride, which leads to dehydration, muscle weakness, and poor organ function.

An electrolyte supplement helps:

- Replenish lost minerals
- Maintain proper hydration levels
- Support normal body functions
- Improve overall health and well-being

Why Choose Our Electrolyte Product?

Our specially formulated electrolyte product for poultry is designed to provide fast and effective relief from heat stress. Here's how it benefits your birds:

- Enhanced Hydration:**
Provides optimal hydration to counteract dehydration caused by heat.
- Quick Absorption:**
The perfect blend of electrolytes ensures rapid absorption, allowing for quick rehydration.
- Promotes Vitality:**
Supports energy levels, reducing lethargy and promoting healthy growth or egg production.
- Boosts Immunity:**
Strengthens the bird's immune system, helping them fight off the effects of heat stress.
- All-Natural Ingredients:**
Safe for all poultry types, with natural components that don't affect the taste or quality of water and feed.
- Easy to Use:**
Simply mix with water or feed to ensure birds are receiving the electrolytes they need.

Key Benefits at a Glance

- Restores Electrolyte Balance – replenishes lost electrolytes due to heat stress.
- Supports Hydration – prevents dehydration and promotes optimal hydration levels.
- Boosts Productivity – helps maintain consistent egg production and healthy growth.
- Reduces Mortality Risk – helps minimize the risk of heat stress-related fatalities.
- Natural and Safe – formulated with safe, natural ingredients for poultry.

Dosage

500 Gms TO 1 Kg per ton of feed

Manufactured & Marketed by :
