

Master Oxy

DISOLVED **OXYGEN** GENERATOR

Helps regulate pH fluctuations.

Provides advanced dissolved oxygen with high contact efficiency.

Easy-to-use tablet form for aquaculture ponds.

Fast and stable dissolution in water.

Breaks down organic waste & reduces sludge buildup.

Instant releasing of
Dissolved oxygen

Benefits:

- Master OXY is an advanced dissolved oxygen technology that delivers high availability & effective oxygen contact in water.
- It has a fast and stable dissolution rate.
- Available in easy-to-apply tablet form for aquaculture pond systems.
- The tablets settle at the pond bottom and release dissolved oxygen, creating a healthy environment for shrimp, prawn, and fish.
- Its strong oxidative action cleans the pond bottom by breaking down organic waste and reducing sludge buildup through bioremediation.
- Provides excellent deodorizing effects, eliminating bad odour and reducing off-flavour in aquatic species.
- Enhances bottom conditions and improves water coloration, thereby improving overall water quality.
- Helps regulate pH fluctuations for stable pond conditions.

Composition:

Bio-active Minerals and blend of stabilized oxygen precursors, monohydrate sodium salts. In aquaculture, the amount of oxygen needed by a shrimp, prawn and Fish depends on its body surface. Approximately 4 ppm is the minimum required for life processes in aquaculture waters.

Dosage:

Fish - 1 kg tablets / acre preferably late evening to compensate dissolved oxygen depletion that generally occurs at early morning hours. Repeat once in a week for better pond condition.

For note

Low Density 1 Kg per acre; High Density 2 Kg per acre

Manufactured & Marketed by :
